

tablein

The cost of sending an SMS from **Tablein** depends on the **destination country** and the **mobile network operator (GSM network)** of the **recipient**. The price shown is based on the **final operator that delivers the SMS to the customer's phone** - not the restaurant's phone number or operator. **You can check the SMS rates for each destination in the table below.**

Country restrictions and verification

Some countries have **SMS delivery restrictions** and may require **additional verification or registration** before SMS can be delivered successfully. Please make sure to check the destination country requirements before starting to use the SMS service. If a country has restrictions, please contact support@tablein.com for more details.

Important - SMS character limits

The price shown is for **1 standard SMS message**. However, SMS messages have a character limit. If your text is longer than the allowed limit, it will automatically be split into multiple SMS messages - and you will be charged multiple times.

Character limits per SMS:

- **Up to 140 characters** for Roman alphabet languages (English, Spanish, etc.)
- **Up to 70 characters** for languages like Hindi, Arabic, Chinese, Korean, Japanese, and Cyrillic languages (Russian, Ukrainian, Serbian, Bulgarian, etc.)

Special characters count as more. Some symbols like \$, ó, à may count as 2-3 characters. **Example:**

The word *Confirmación* contains 14 characters, not 12.

Longer SMS = higher cost

If your message exceeds the character limit (including spaces), it will be split into multiple SMS parts: 1 SMS = normal price, 2 SMS = double price, 3 SMS = triple price, etc. Example: If your SMS contains **141 characters**, it will be sent as **2 SMS messages**, so the cost will be **2x the listed price**.

| Country | Price per 1 SMS (Eu) | Restrictions |
|-----------------------|----------------------|--|
| Albania | 0,1824 - 0,1824 | |
| Argentina | 0,1464 - 0,2084 | |
| Armenia | 0,1464 - 0,1464 | |
